

Wyoming Occupational Fatalities Unchanged from 2015 to 2016

The Research & Planning (R&P) section of the Wyoming Department of Workforce Services reported today that there were 34 occupational fatalities in 2016 (see Figure 1). This is the same number of fatalities that occurred in 2015. Variations in fatalities from year to year are, to some extent, the result of the random nature of work-related accidents. Furthermore, there is not always a direct relationship between workplace fatalities and workplace safety. For example, suicides and homicides that occur in the workplace are included as occupational fatalities. Occupational fatalities are counted in the state where the injury occurred, not necessarily the state of residence or the state of death.

The fatality counts featured in this release are compiled by the Census of Fatal Occupational Injuries (CFOI) program (a joint effort of R&P and the Bureau of Labor Statistics or BLS) and may not match those from other programs, such as the Occupational Safety and Health Administration (OSHA) because of differences in scope and methodology. In addition to regular employees, CFOI includes volunteer workers and self-employed individuals. The CFOI program utilizes a wide variety of data sources, such as OSHA reports, workers' compensation, vital records, coroner's reports, media reports, and police and highway patrol reports of vehicle crashes. Additionally, similar data sources from other states are routinely used to identify workplace fatalities. For example, a worker fatally injured in a highway incident in Wyoming may be covered by workers' compensation in another state. That information is made available to R&P as part of confidential data sharing agreements between the states and federal government (BLS).

In 2016, 10 deaths occurred in natural resources & mining (or 29.4% of all deaths; see Table below). Within that category, six deaths were in agriculture (17.6%) and four deaths (11.8%) were in mining (including oil & gas). Trade, transportation, & utilities accounted for 10 deaths (29.4%), with six deaths in transportation & warehousing (17.6%). There were three deaths each in construction (8.8%), professional & business services (8.8%), and government (8.8%). Approximately two-fifths (41.2%) of workplace fatalities were the result of transportation incidents (see Figure 2).

From 2003-2016, transportation incidents made up 56.4% of all workplace deaths. Transportation incidents include highway crashes as well as incidents involving aircraft and other vehicles.

Table: Wyoming Occupational Fatalities by Selected Industry, 2016

Industry	Number	Col. %
Total	34	100.0%
Total Private	31	91.2%
Natural Resources & Mining	10	29.4%
Agriculture, Forestry, Fishing, & Hunting	6	17.6%
Mining, Quarrying, & Oil & Gas Extraction	4	11.8%
Construction	3	8.8%
Trade, Transportation, & Utilities	10	29.4%
Transportation & Warehousing	6	17.6%
Professional & Business Services	3	8.8%
All Other Industries	5	14.7%
Government	3	8.8%

Figure 2: Wyoming Occupational Fatalities and Transportation Incidents, 2003-2016

Source: U.S. Department of Labor, Bureau of Labor Statistics, Census of Fatal Occupational Injuries, in cooperation with State and Federal Agencies.
 From 2003 to 2010 transportation incidents are based on the BLS Occupational Injury and Illness Classification System (OIICS). From 2011 to 2016 transportation incidents are based on OIICS 2.01. Due to substantial differences between OIICS 2.01 and the original OIICS structure, data for transportation incidents from 2011 forward should not be compared to prior years.
