- ➤ The OES program produces employment and wage estimates for about 800 occupations. These are estimates of the number of people employed in certain occupations, and estimates of the wages paid to them.
- ➤ R&P maintains annual OES data in like format (using NAICS and SOC) from 2002 to present.
- ➤ Quarterly UI/WC data allow us to understand and project employment by Industry and Region. OES data lends itself to an understanding of the occupational distribution of employment within the industry and changes in that distribution over time.

Occupational Employment Statistics - Estimated Employment by Year

Combining UI/WC Data with OES Data

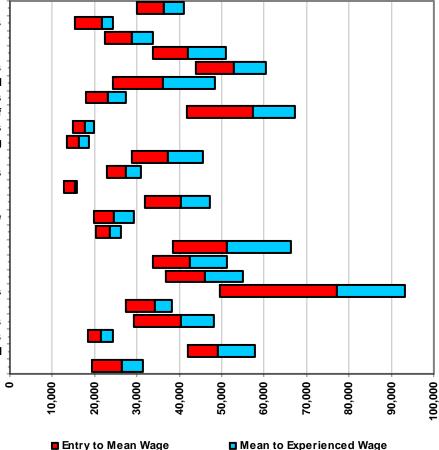

- ➤ In a nutshell, combining UI/WC tax based industry data with the OES program data are the foundation of occupational projections.
- ➤ The Employment and Training Administration (ETA), Bureau of Labor Statistics (BLS), National Association of State Workforce Agencies (NASWA), and State Projections Workgroup collaborated to create a Projections Suite that is used to produce reliable long- and short-term occupational employment projections.
