Selected Demographics of Wyoming's Workforce in 2019 by: Michael Moore, Editor

Of the 350,192 individuals working in Wyoming at any time in 2019, approximately one in five (20.4%) was age 55 or older. In addition, another 12.9% of persons working in Wyoming in 2019 were nonresidents, which are primarily individuals who commute to Wyoming for work from another state or country, or are short-term labor working for companies based outside of Wyoming.

he Research & Planning (R&P) section of the Wyoming Department of Workforce Services publishes detailed demographics tables of Wyoming's workforce by gender, age, industry, and county of employment annually at https://doe.state.wy.us/LMI/earnings_tables.htm. This article provides an introduction to the demographics of Wyoming's labor market in 2019, particularly at the industry and county levels.

The numbers of individuals working in Wyoming presented in this article are based on employers' quarterly wage and employment reports to the Unemployment Insurance (UI) tax section of the Wyoming Department of Workforce Services; these are referred to as *wage records*. As noted by Bullard (2015), UI covered

(Text continued from page 1)

By linking the Wage Records database with other administrative databases, such as the driver's license file from the Wyoming Department of Transportation, R&P is able to identify demographic information and other variables for each county and industry, including number of persons working, average annual wages, average number of quarters worked, average number of employers, gender, and age.

Introduction

There were 350,192 individuals working in Wyoming at any time in 2019, 40.2% of whom were women, while 47.0% were men (see Table 1). The remaining 12.8% were nonresidents, or individuals for whom demographic data are not available. Nonresidents are primarily individuals who commute to Wyoming for work from another state or country, or are short-term labor

working for companies based outside of Wyoming. Women had an average annual wage of \$29,057 in 2019, compared to \$44,502 for men. Women worked an average of 3.2 quarters during the year, compared to 3.1 quarters for men. Nonresidents had an average annual wage of \$15,729 and worked 2.0 quarters on average.

Table 1 also shows the number of persons working in Wyoming by age group. The 55 or older age group had the greatest share of workers at 20.4%. In other words, approximately one in every five people working in Wyoming at any time during the year was age 55 or older. A related article showing how the 55 or older workforce has changed over the last 20 years will be published in a forthcoming issue of Wyoming Labor Force Trends.

The 25-34 and 35-44 age groups made up similar proportions of the workforce with 18.9% and 18.2%, respectively. The 45-54 age group made up 14.8% of all persons working in the state, followed by 14.7% for individuals under age 25. The highest average annual wages were found in the 45-54 (\$49,377) and 35-44 (\$45,836) age groups.

Table 1: Selected Demographics of Wyoming's Workforce, 2019

Prepared by M. Moore, Research & Planning, WY DWS, 9/1/20.

Demographics by Industry

The gender composition of one industry often differs substantially from another, as shown in Table 2. For example, men accounted for the majority of workers in industries such as mining (79.4%), manufacturing (74.4%), and wholesale trade, transportation, warehousing, & utilities (71.7%). Industries in which women made up a greater proportion of workers than men included health care & social assistance (76.3%), educational services (64.8%), and financial activities (57.1%). The industries with the greatest proportions of nonresident workers were construction (28.7%) and leisure & hospitality (24.6%).

The differences in persons working in Wyoming by industry and age are shown in Table 3 (see page 5). Some industries employed large proportions of younger workers under age 25, including leisure & hospitality (27.3%) and retail trade (23.6%).

In some industries, at least one in four (25.0%) workers was age 55 or older; this included public administration (27.0%), educational services (26.7%), wholesale trade, transportation, warehousing, & utilities (25.3%), and financial activities (25.0%).

Prior research from R&P showed that those industries with a high concentration of individuals age 55 or older were also industries with a high percentage of jobs that required a bachelor's degree or

^bNonresidents are individuals for whom data on gender are not available. Note that nonresident counts and percentages may vary slightly between Tables 2 and 3. For example, age data may be available for an individual, while gender data may not. Source: Demographics and Earnings of Persons Working in Wyoming by County, Industry, Age, & Gender, 2000-2019. Prepared by M. Moore, Research & Planning, WY DWS, 9/1/20.

higher (Gallagher, et al., 2012). Knapp (2013) noted that: "given the more rapid aging of the workforce in industries with workers holding post-high school degrees, circumstances may lead to significant competition for qualified employees."

Demographics by County of Employment

The number and percentage of persons working in Wyoming at any time during the year in 2019 by county of employment and

gender are shown in Table 4 (see page 6). Counties with a large presence of mining jobs often had the greatest proportions of male workers, such as Campbell (53.9%), Sublette (52.0%), Sweetwater (51.2%), and Natrona (49.9%) counties. Many of Wyoming's least populous counties had the greatest proportion of women working in 2019, including Niobrara (54.2%), Goshen (48.4%), Hot Springs (47.8%), and Weston (46.8%) counties.

In Teton County, which relies on large numbers of out-of-state workers to fill tourism-related jobs, approximately

^bNonresidents are individuals for whom data on gender are not available. Note that nonresident counts and percentages may vary slightly between Tables 2 and 3. For example, age data may be available for an individual, while gender data may not. Source: Demographics and Earnings of Persons Working in Wyoming by County, Industry, Age, & Gender, 2000-2019. Prepared by M. Moore, Research & Planning, WY DWS, 9/1/20.

one-third (33.5%) of all workers were nonresidents in 2019. In Converse County, nearly one in four (22.6%) persons working was a noresident. Converse County experienced rapid economic growth in 2018 and 2019 because of large oil & gas pipeline projects. Converse County's average monthly employment reached a historical high of 7,614 in 2019Q3 and then expanded to 7,708 in 2019Q4 (Moore, 2020). In order to meet the labor demands of such rapid economic growth, employers likely relied upon nonresidents to fill job vacancies after

exhausting the local labor force.

Albany County had the greatest proportion of workers younger than 25 (23.5%), likely due to the number of college students living in that county (see Table 5, page 7). Teton County had the smallest proportion of workers under 25 (8.4%).

Many rural, less populous counties had a greater proportion of workers 55 or older, including Niobrara (32.0%), Washakie (30.1%), Hot Springs (27.3%), Weston (26.2%), and Big Horn (25.9%) counties.

^aNonresidents are individuals for whom data on gender are not available. Note that nonresident counts and percentages may vary slightly between Tables 4 and 5. For example, age data may be available for an individual, while gender data may not. Source: Demographics and Earnings of Persons Working in Wyoming by County, Industry, Age, & Gender, 2000-2019. Prepared by M. Moore, Research & Planning, WY DWS, 9/1/20.

Conclusion

Individuals ages 55 or older made up 20.4% of all persons working in Wyoming at any time during the year in 2019. In other words, one in every five workers will reach the traditional retirement age of 65 within the next decade. Some industries had an even higher proportion of workers ages 55 or older, such as agriculture (27.8%), public administration (27.0%), and educational services (26.7%).

Forthcoming articles in *Wyoming Labor Force Trends* will look at some of the causes in the changes of Wyoming's demographics over the last 20 years and what implications these demographics could have on the labor market.

R&P Publishes Report on Youth, Other Populations with Barriers to Employment

by: Michael Moore, Editor

The Research & Planning (R&P) section of the Wyoming Department of Workforce Services recently published a report that serves as supporting documentation for Wyoming's Workforce Innovation and Opportunity Act (WIOA) Annual Report for Program Year 2019. The primary focus of the report is Wyoming youth, which is defined for the report as individuals ages 15-24, and other populations with barriers to employment, such as homeless, English language learners, veterans, and others. The full report is available online at https://doe.state.wy.us/LMI/WIOA_2019_ report.pdf.

Wyoming's youth population decreased over the last five years, and the number of youth working decreased by nearly twice as much. From 2014 to 2019, the estimated population of individuals ages 15-24 decreased from 78,176 to 73,392 (-4,784, or -6.1%). The number of youth working at any time during the year in Wyoming decreased from 59,886 to 51,571 (-8,315, or -13.9%; see Figure 1, page 9).

There are several possible reasons for the decline in Wyoming's youth population. Wyoming entered a period of economic downturn in 2015 that lasted seven quarters¹, while at the same time all of Wyoming's surrounding states had growing economies. Some youth may have

¹ Research & Planning defines economic downturn as two or more consecutive quarters of over-the-year decrease in average monthly employment and total wages based on data from the Quarterly Census of Employment and Wages. The most recent economic downturn lasted seven quarters from 2015Q2 to 2016Q4.

left Wyoming with parents who lost jobs and found work in another state.

Others may have left Wyoming themselves to seek work in another state. From 2014 to 2019, Wyoming's millennial population — those born from 1981 to 1996 (Pew Research Center, 2015) — decreased by an estimated 7,681 individuals (-6.0%). Only three other states had greater declines in their millennial populations: Vermont (-9.4%), West Virginia (-6.6%), and Rhode Island (-6.2%). At the same time, some surrounding states saw their millennial populations grow from 2014 to 2019, including Colorado (15.0%), Idaho (8.5%), and Utah (5.4%).

Prior research from R&P has illustrated how Wyoming youth leave the state as they age. In *A Decade Later* (2012), Glover found that from 1992 to 2006, the average five-year retention rate for 18-year-olds with Wyoming as a primary state of wages was 55.8%. The average 10-year retention rate from 1992 to 2001 was 43.8%.

Comparing SOII Injury Estimates to Workers' Compensation Data

by: Chris McGrath, Senior Statistician

This article compares estimates of nonfatal work-related injuries and illnesses in Wyoming's workforce between the vears including 2014 and 2018 using data from two sources: the Survey of Occupational Injuries & Illnesses and Workers' Compensation program. Methods for collecting and coding data for these two programs are different, but both sources can be used to examine workplace injuries and illnesses across industries and other variables (see the Box).

Methodology

Survey of Occupational Injuries & Illnesses

The Research & Planning (R&P) section of the Wyoming Department of Workforce Services conducts the Survey of Occupational Injuries and Illnesses (SOII) for Wyoming in cooperation with the U.S. Bureau of Labor Statistics (BLS) annually as part of a nationwide data collection effort. SOII data are collected in all 50 states, the District of Columbia, Guam, Puerto Rico, and Virgin Islands,

and the estimates from this survey are the primary source of information on nonfatal work-related injuries and illnesses in the United States. Incidence rates represent the number of injuries and illnesses per 100 full-time workers. The data

collected include estimates of incidence rates by industry and the nature of the injury or illness. Worker demographics, such as age, gender, and occupation are also included. Case characteristics, including part of body, source of injury or illness, the

Box: SOII and Workers' Compensation:What are the Differences?

Workers' compensation claims and Survey of Occupational Injuries & Illnesses (SOII) recordable injuries represent workplace injuries. Not every workers' compensation claim qualifies as a SOII recordable injury, and not every SOII injury results in a workers' compensation claim.

There are differences in what qualifies as a workers' compensation claim and SOII recordable injury. For example, an employee slips and falls on the ice in the parking lot and hurts her ankle. She goes to the ER for an x-ray and discovers it is only a sprain, and the doctor releases the employee without further treatment. This incident would not be a recordable work-related injury under the SOII because there was no lost time and no treatment beyond first-aid. However, this injury would be a workers' compensation claim because the injury was work-related and there were expenses related to the injury.

Also, in some instances an employee could have physical effects from his job months or years after working that would not be recorded in the SOII, but could be covered by workers' compensation. In contrast, the SOII records injuries in the year they occur.

These differences show workers' compensation is fundamentally focused on compensation from the injury versus the recordkeeping of OSHA recordable injuries under the SOII. manner in which the injury or illness was produced or inflicted, and the nature or physical characteristics of the disabling injury or illness are covered as well.

SOII uses a stratified random sampling method based on a set target relative standard error that is used for each benchmarking industry (SOII State Operations Manual-2016). This means each year the SOII sample size and type of businesses within the sample vary, with a large portion of businesses changing each survey year. Data from railroads, which are reported to the Federal Railroad Administration, and mining firms, which are reported to the Mine Safety and Health Administration, are in the scope of the SOII. This information is reported directly to BLS from these organizations (SOII State Operations Manual, 2016).

The Occupational Injury and Illness Classification System (OIICS) Manual provides the classification system used to code the case characteristics of non-fatal injuries and illnesses in the SOII (U.S. Bureau of Labor Statistics, 2014). This manual contains the rules of selection, code descriptions, code titles, and numeric codes, all used to help in giving each injury and illness a proper code. For more information, see https://www.bls.gov/iif/oshoiics.htm.

Workers' Compensation Program

Workers' compensation programs are designed to provide benefits to injured workers while employers face limited liability (Clayton, 2003). Wyoming is one of four monopolistic states in which employers purchase insurance only through the state workers' compensation fund. Some industry subsectors are not required to carry workers' compensation insurance, such as food & beverage stores, telecommunications,

and legal services. The rates of injury discussed in this article are based on the Wyoming Workers' Compensation Claimant Database (Manning, 2019) and represent the number of injuries per 100 workers.

Whereas SOII uses stratified random sampling to make estimates, workers' compensation data includes injury and illness data reported by all Wyoming businesses required to carry workers' compensation insurance. Diagnosis codes for the nature of injury in workers' compensation use the ICD-10-CM (International Classification of Diseases, Tenth Revision, Clinical Modification).

Results

Despite difference in methodology and injury rates, the SOII and workers' compensation programs showed similar trends from 2014 to 2018. Industries are classified by the North American Industry Classification System (NAICS), and this article looks at three industries that had relatively high rates of injury according to both the SOII and workers' compensation consistently from 2014 to 2018: construction (NAICS 23), manufacturing (NAICS 31-33), and education & health services (NAICS 61-62). Changes in incidence rates from 2014 to 2018 were not tested for statistical significance.

Both the SOII and workers' compensation show downward trends in incidence rates in manufacturing and education & health services from 2014 to 2018. According to SOII data, the incidence rate for manufacturing went from 4.7 to 3.6, while workers' compensation data shows a decrease from 7.13 to 5.12 (see Table 1, page 12). Likewise, the SOII shows incidence rates of 4.7 and 3.9

for education & health services, compared to a decrease from 5.13 to 4.16 in workers' compensation data.

The two programs differ in incident rate changes in the construction industry. The SOII shows rates of 3.6 in 2014 and 3.7 in 2018, while workers' compensation shows a decrease from 5.66 to 4.57.

Conclusion

The SOII and workers' compensation gather information on work-related injuries and illnesses in Wyoming. Although the purpose of the information collected for both the SOII and workers' compensation is focused on work-related injuries and illnesses, some of the data are not directly comparable. From 2014 to 2018 both programs showed that the construction, manufacturing, and education & health services industries had higher incidence rates than other industries, and strains and sprains were the most frequently occurring injury.

For more information on the SOII and 2018 results, visit https://doe.state.wy.us/LMI/safety.htm.

Wyoming Unemployment Falls to 7.1% in July 2020

by: David Bullard, Senior Economist

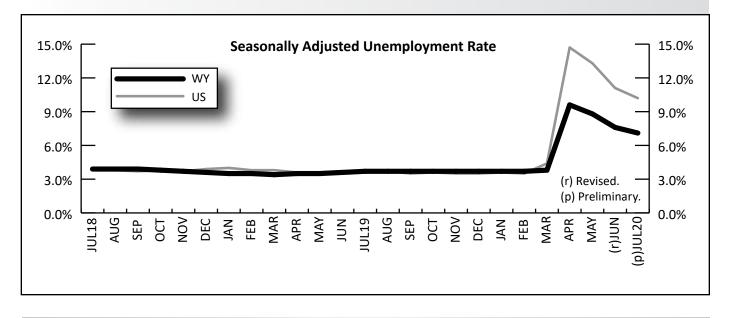

he Research & Planning section of the Wyoming Department of Workforce Services reported that the state's seasonally adjusted¹ unemployment rate fell from 7.6% in June to 7.1% in July. Wyoming's unemployment rate peaked at 9.6% in April and has steadily decreased since then as some businesses have reopened and individuals have returned to work. It appears that the state's economy is gradually recovering from the large disruptions related to the COVID-19 pandemic.

Economic conditions improved somewhat around the state as unemployment rates fell in all 23 counties from June to July. The largest unemployment rate decreases occurred in Teton County (down from 9.4% to 5.7%), Lincoln County (down from 6.7% to 5.4%), Carbon County (down from 5.8% to 4.7%), Sublette County (down from 8.4% to 7.5%), and Laramie County (down from 6.7% to 5.8%).

Compared to last year, unemployment rates were higher in every county. The largest increases were seen in Natrona County (up from 3.7% to 10.2%), Sweetwater County (up from 3.9% to 8.8%), Converse County (up from 2.6% to 7.0%), and Uinta County (up from 3.9% to 8.0%). The smallest increases occurred in Albany County (up from 3.6% to 3.9%), Goshen County (up from 3.7% to 4.7%), and Crook County (up from 3.4% to 4.4%).

Albany County's unemployment rate of 3.9% was the lowest in the state. It was followed by Niobrara County at 4.3%, Crook County at 4.4%, and Weston County at 4.6%. The highest unemployment rates were found in Natrona County at 10.2%, Campbell and Sweetwater counties, both at 8.8%, and Uinta County at 8.0%.

Total nonfarm employment in Wyoming (not seasonally adjusted and measured by place of work) decreased from 297,200 in July 2019 to 276,700 in July 2020, a decline of 20,500 jobs (-6.9%).

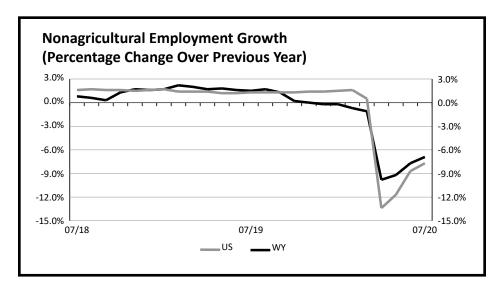

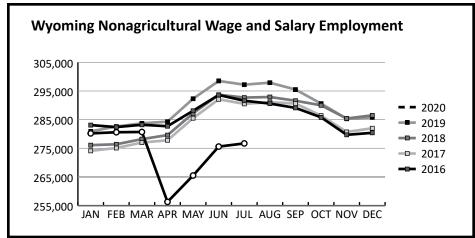

Seasonal adjustment is a statistical procedure to remove the impact of normal regularly recurring events (such as weather, major holidays, and the opening and closing of schools) from economic time series to better understand changes in economic conditions from month to month.

^aAn average month is considered 4.33 weeks. If a month has four weeks, the normalization factor is 1.0825. If the month has five weeks, the normalization factor is 0.866. The number of raw claims is multiplied by the normalization factor to achieve the normalized claims counts.

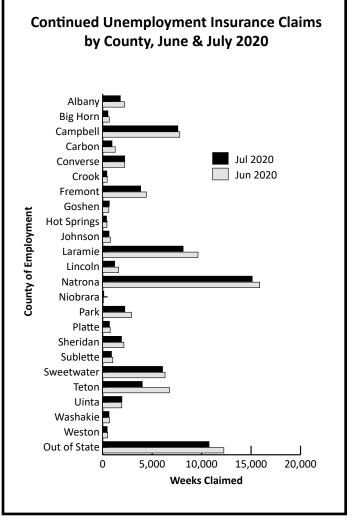

Wyoming Normalized^a Unemployment Insurance Statistics: Continued Claims by: Sherry Wen, Principal Economist

Wyoming had 73,590 total weeks claimed in July, down from 83,807 in June (-10,217, or -12.2%).
