Wyoming Employers Add Nearly 90,000 New Hires in 2017

by: *Michael Moore, Editor; methodologist: Lisa Knapp, Senior Research Analyst*

During any given quarter, Wyoming employers hire thousands of individuals to fill jobs. Among these total hires are *new hires*, or individuals who have never before worked for that specific employer.

The Wyoming New Hires Job Skills Survey is conducted by the Research & Planning section of the Wyoming Department of Workforce Services on a quarterly basis, from on a sample of new hires. The purpose of this survey is to collect information about jobs that are filled in the state, such as occupation, typical job duties, wages and benefits, license and certification requirements, necessary job skills, employers' satisfaction with their new hires' skills, and more. In addition, by linking New Hires Survey data with several administrative databases, R&P is able to identify demographics of new hires, such as gender and age.

This article was excerpted from the *2019 Wyoming Workforce Annual Report*, available online at https://doe.state.wy.us/LMI/annual-report/2019/2019_Annual_Report.pdf.

New Hires Survey results are published annually, and contain a wealth of information about the state's job and labor markets. In 2017, there were 88,561 new hires in Wyoming. As shown in Table 1 (see page 3), the majority of all new hires worked in occupations with no formal educational requirement (52.0%) or in occupations that required a high school diploma or equivalent (33.0%); together, these two categories accounted for 85.0% of all new hires.

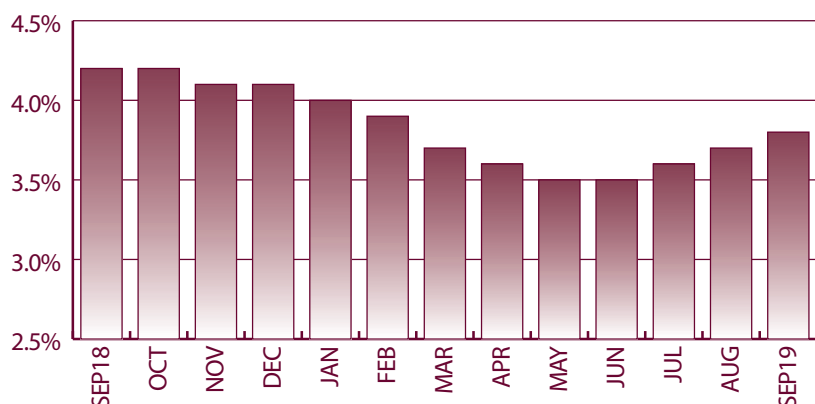

The remaining 13,292 new hires (15.0%)

(Text continued on page 3)

HIGHLIGHTS

- Of the 88,561 new hires in Wyoming in 2017, nearly one in 10 were older workers ages 55 or older. In addition, 23.3% of all older new hires were in jobs requiring some postsecondary education, compared to 15.0% of all new hires. ... page 7
- Wyoming's rental vacancy rate has tended to move with the state's unemployment rate, which may be related to the transient nature of the state's labor force. ... page 10

(Text continued from page 1)

worked in occupations that required some education beyond a high school diploma, from some college courses or a postsecondary certificate to a master's degree or doctoral degree. As shown in Table 1, for example, 5.9% of all new hires occupations required a bachelor's degree, while 5.8% required a postsecondary certificate.

Table 1 also shows the differences in median hourly wage by educational requirement. Occupations with no formal educational requirement had a median hourly wage of \$9.89, compared to \$16.77 for jobs that required a postsecondary certificate and \$23.57 for jobs that required a bachelor's degree.

This article provides a few examples of the type

of information available from the New Hires Survey. Comprehensive new hires data for 2017 are available online at <https://doe.state.wy.us/LMI/newhires.htm>.

Discussion

For this article, five occupations were selected to illustrate the type of

information available from the New Hires Survey: computer user support specialists, paralegals & legal assistants, registered nurses, heating, air conditioning & refrigeration mechanics, and truck drivers, heavy & tractor-trailer (see Table 2). These five occupations were chosen for several reasons. First, each occupation had at least 100 estimated new hires, and the occupations

Prepared by L. Knapp and M. Moore, Research & Planning, WY DWS, 4/15/19.

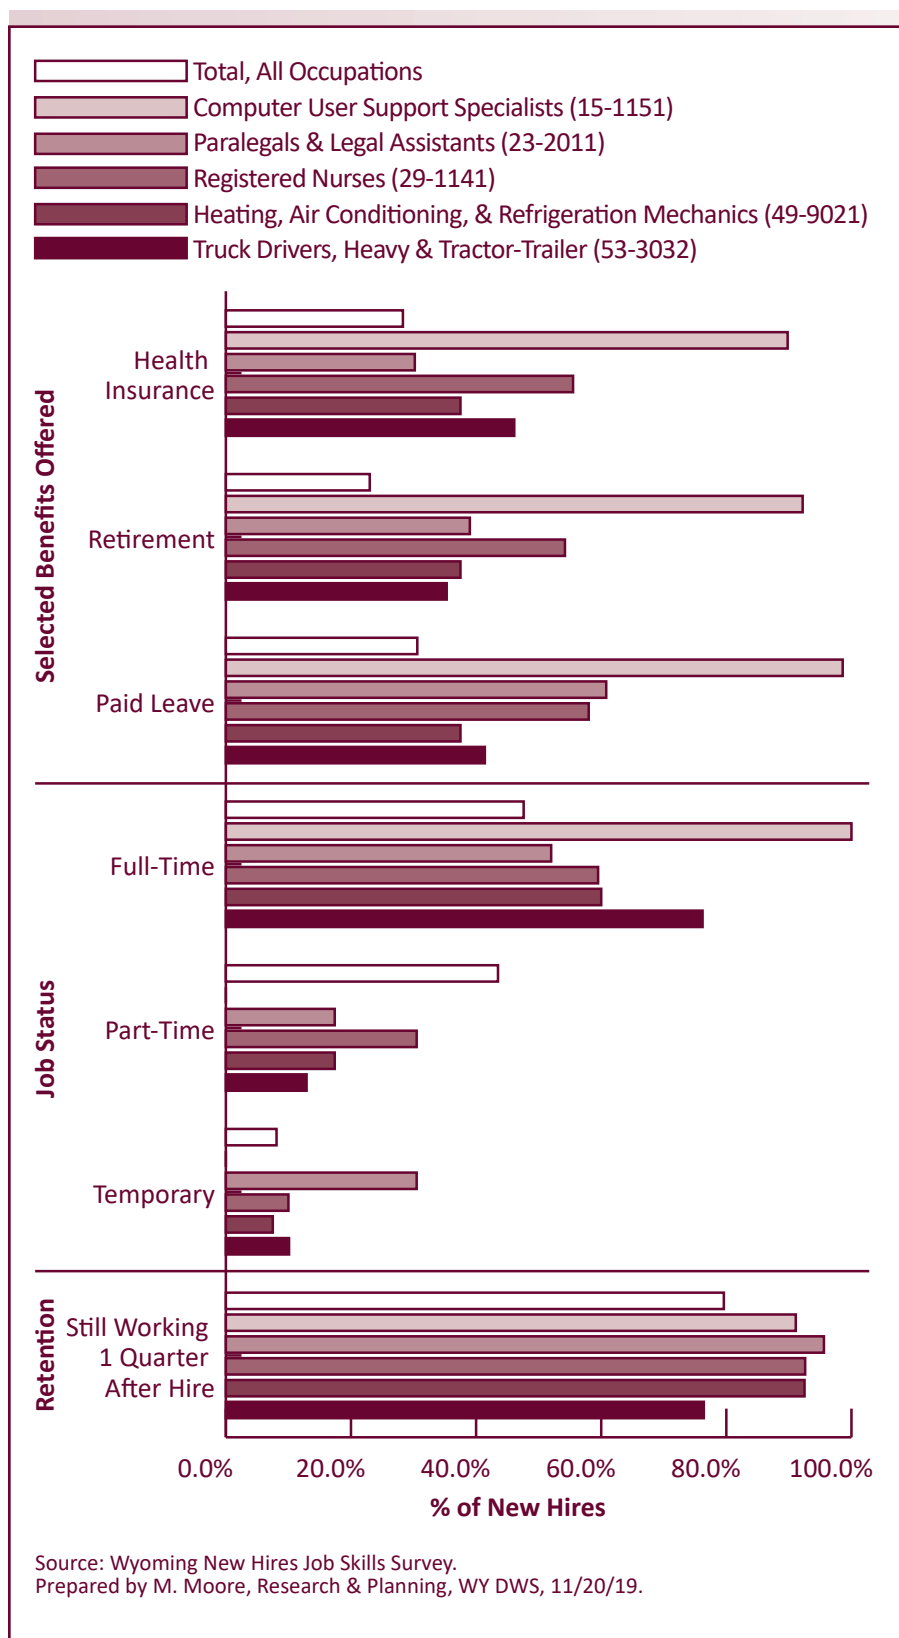

Figure 1: 2017 Wyoming New Hires: Percent Offered Selected Benefits, Job Status, and Percent Still Working One Quarter After Hire for Occupations Requiring More than a High School Diploma

required varying degrees of postsecondary education. In addition, these five occupations work in different sectors of Wyoming's economy with different skillsets, and the demographics of the individuals hired for these jobs were noticeably different from one another. The educational requirements discussed in this article represent the typical level of education required to enter a specific occupation as identified by the U.S. Bureau of Labor Statistics.

The occupation that required more than a high school diploma with the greatest number of new hires was truck drivers, heavy & tractor-trailer (2,956; see Table 2). All five occupations discussed in this article had greater average hourly wages than the overall total (\$12.00). Registered nurses had the highest wage (\$26.00) of the five occupations.

Figure 1 shows characteristics of new hires occupations, such as benefits offered, full- and part-time job status, and retention.

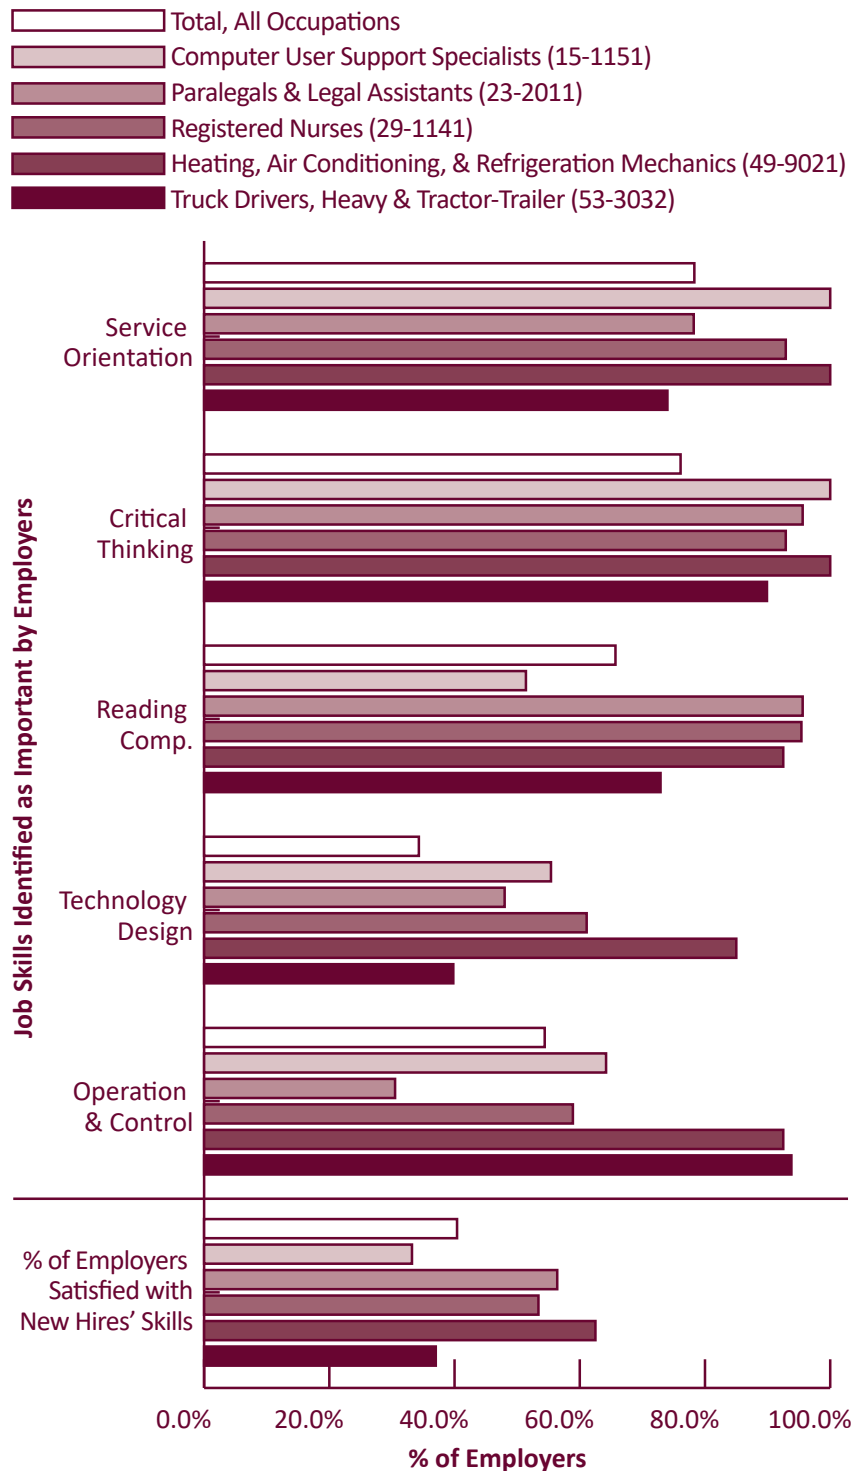

In general, occupations requiring more than a high school diploma were offered benefits at a greater rate than the statewide average. Computer user

support specialists were far more likely than the other occupations to be offered benefits such as health insurance, access to a retirement plan, and paid leave. For example, 89.8% of computer user support specialists were offered health insurance, compared to 30.2% of paralegals & legal assistants and 55.5% of registered nurses.

In terms of hours worked, 100.0% of all computer user support specialists were hired to work full-time, compared to 76.2% of truck drivers and 59.5% of registered nurses. Paralegals & legal assistants had the highest percentage of new hires who were hired on a temporary basis (30.5%).

Retention refers to the percentage of new hires still working for the same employer one quarter after hire. The overall retainment rate for new hires was 79.6%, compared to 85.9% of new hires in occupations requiring more than a high school diploma. All five of the occupations in Figure 1 had retainment rates of greater than 90%, except truck drivers (76.4%).

The New Hires Survey asks employers to rate the level of importance of five selected skills in terms of performing a job's duties and

Figure 2: 2017 Wyoming New Hires: Percent of Employers Who Identified Selected Job Skills as Important and Percent of Employers Who Indicated they Were Satisfied with New Hires' Skills for Occupations Requiring More than a High School Diploma

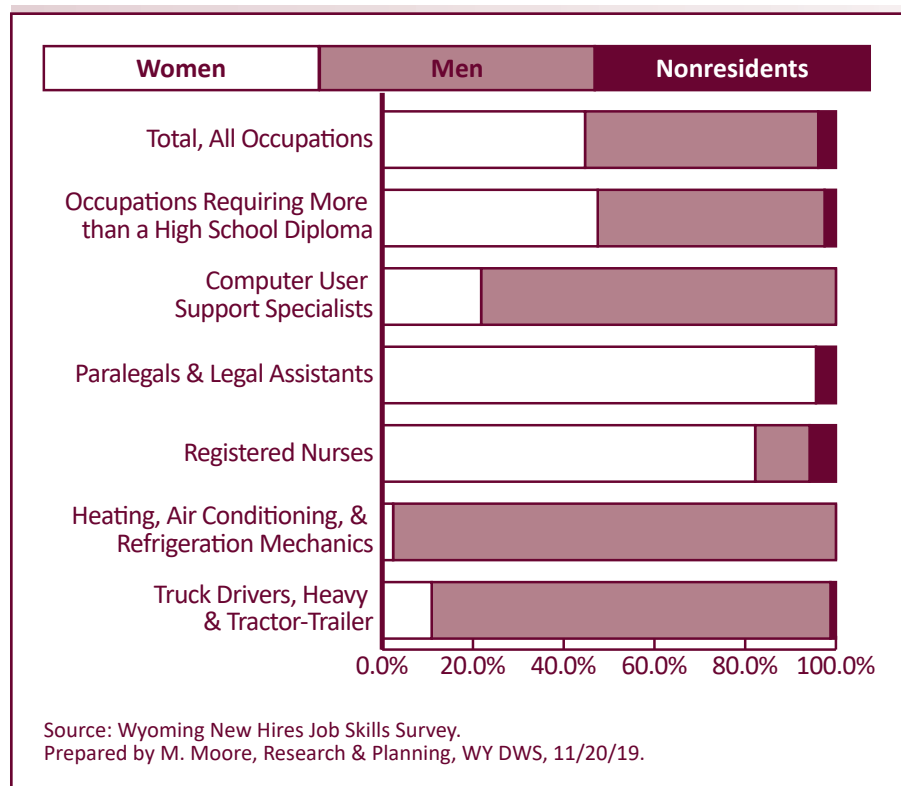

Figure 3: Wyoming New Hires in Selected Occupations Requiring More than a High School Diploma by Gender, 2017

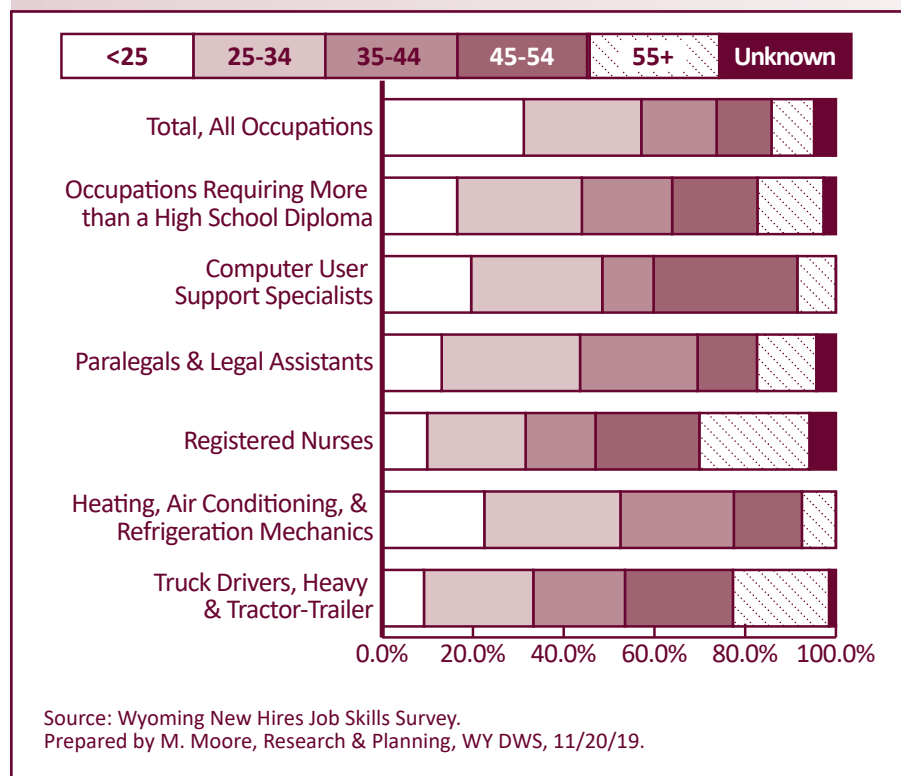

Figure 4: Wyoming New Hires in Selected Occupations Requiring More than a High School Diploma by Age Group, 2017

activities: service orientation, critical thinking, reading comprehension, technology design, and operation & control. Figure 2 (see page 5) shows that 100.0% of the employers who responded identified service orientation and critical thinking as important skills for computer user support specialists and heating, air conditioning, & refrigeration mechanics. Technology design was most important for heating, air conditioning, & refrigeration mechanics, while operation & control was most important for truck drivers.

Employers are also asked to rate their satisfaction with new hires' skills. As shown in Figure 2, heating, air conditioning, & refrigeration mechanics had the greatest percentage of employers satisfied with their skills (62.5%), while computer user support specialists had the lowest (33.2%).

Figure 3 shows the difference in gender among the selected occupations. Women made up the majority of new hires in paralegal & legal assistants (95.6%) and registered nurses (82.2%), while men made up the majority of heating, air conditioning, & refrigeration mechanics (97.6%) and truck drivers (87.9%).

Figure 4 shows the ages

of new hires in the selected occupations. While individuals age 55 or older made up 9.4% of all new hires, some occupations had a substantially greater proportion of new hires age 55 or older, such as registered nurses (24.3%) and truck drivers (21.2%).

Conclusion

The data from the Wyoming New Hires Job Skills Survey have many practical uses:

- Students and jobseekers can use the

data to identify which occupations employers are hiring for, which have the highest wages, and which are most likely to offer selected benefits.

- Employers can use the data to compare wages and benefits for occupations.
- Training providers and policymakers can use the data to determine training needs by identifying skills that employers have identified as important and how satisfied employers are with the skills of their new hires.

What Jobs Were Older Workers Hired to Fill in 2017?

by: **Michael Moore**, Editor

Wyoming residents ages 55 or older have made up an increasingly larger part of the state's workforce over the last two decades. In 2018, one in five persons working in Wyoming at any time was age 55 or older (Moore, 2019). In many cases, Wyoming employers are hiring older workers who have never worked for them before in order to fill job vacancies.

This article uses Wyoming New Hires Job Skills Survey (*New Hires Survey*) results to identify the types of jobs for which older workers are being hired. For more information on the New Hires Survey, please see the related article on page 1 of this issue of *Wyoming Labor Force Trends*.

New hires are individuals who have never before worked for that specific employer. For the purposes of this article, the terms *older workers* and *older new hires* refer to individuals ages 55 or older. In 2017, there were 88,561 new hires in Wyoming. Of those, an estimated 8,301 (9.4%) were older workers

(see Table 1, page 8). In addition, 23.3% of all older new hires were in jobs requiring some postsecondary education, compared to 15.0% of all new hires. One in 10 older new hires (10.0%) were in jobs requiring a postsecondary certificate compared to 5.8% of all new hires, and 9.2% of older new hires were in jobs requiring a bachelor's degree, versus 5.9% of all new hires.

Since the Research & Planning (R&P) section of the Wyoming Department of Workforce Services began collecting New Hires Survey data in 2009, several occupations routinely have the greatest number of new hires in any given quarter. These are often entry-level, seasonal, temporary, or part-time jobs that require little or no education or training, such as cashiers, retail salespersons, construction and landscaping workers, janitors, and maids, among others. As shown in Table 2 (see page 8), many of those same jobs were also the most frequently occurring for older new hires, such as retail salespersons, landscaping &

groundskeeping workers, and hotel, motel, & resort desk clerks.

The top 10 most frequently occurring occupations that required some postsecondary education for older new

hires are shown in Table 3 (see page 9). There were 627 older workers hired as truck drivers, heavy & tractor-trailer, which made up 21.2% of all new hires in this occupation. Several of the occupations in Table 3 were related to education or health

care, including registered nurses, substitute teachers, nursing assistants, and teacher assistants.

There were 10 occupations in which older new hires accounted for at least one in four (25.0%) of all new hires (see Table 4, page 9). Nearly half (44.7%) of all data entry keyers were older new hires, followed by taxi drivers & chauffeurs (39.4%), child, family, & school social workers (32.5%), and library assistants, clerical (32.3%).

Table 1: Total Number of All New Hires and Older New Hires Ages 55+ in Wyoming by Typical Educational Requirement, 2017

Education ^a	Total, All New Hires		Older New Hires Ages 55+	
	N	Column %	N	Column %

What do Housing Vacancy Data Say about Wyoming's Economy?

by: David Bullard, Senior Economist

Many different economic indicators are published regularly in *Wyoming Labor Force Trends*. These include employment, unemployment, wages, building permits, turnover rates, and various demographic data on Wyoming residents. This article introduces a quarterly data series for Wyoming published by the U.S. Census Bureau. For many years, the Census Bureau has collected and published housing vacancy estimates for the U.S. and all 50 states. Separate series are available for homeowner housing units and rental units. Annual state level data were published from 1986 to 2004, and quarterly data are available from 2005 to third quarter 2019. Unlike state population data, which are only published

annually, housing vacancy data are available every quarter, and with only a relatively short time lag (i.e., third quarter 2019 data were published on October 29, 2019).

Figure 1 shows the vacancy rate for homeowner units in Wyoming and the U.S. The homeowner vacancy rate is defined as “the proportion of the homeowner inventory that is vacant for sale” (U.S. Census Bureau, 2019). From 1986 to 2019, Wyoming’s vacancy rate ranged from highs of 3.3% in 1986 and in first quarter 2018 to a low of 0.8% in fourth quarter 2011. The U.S. vacancy rate peaked at 2.9% in the first and fourth quarters of 2008 and then gradually decreased to 1.3% in second quarter 2019.

Source: U.S. Census Bureau
Prepared by D. Bullard, Research & Planning, WY DWS, 11/05/2019.

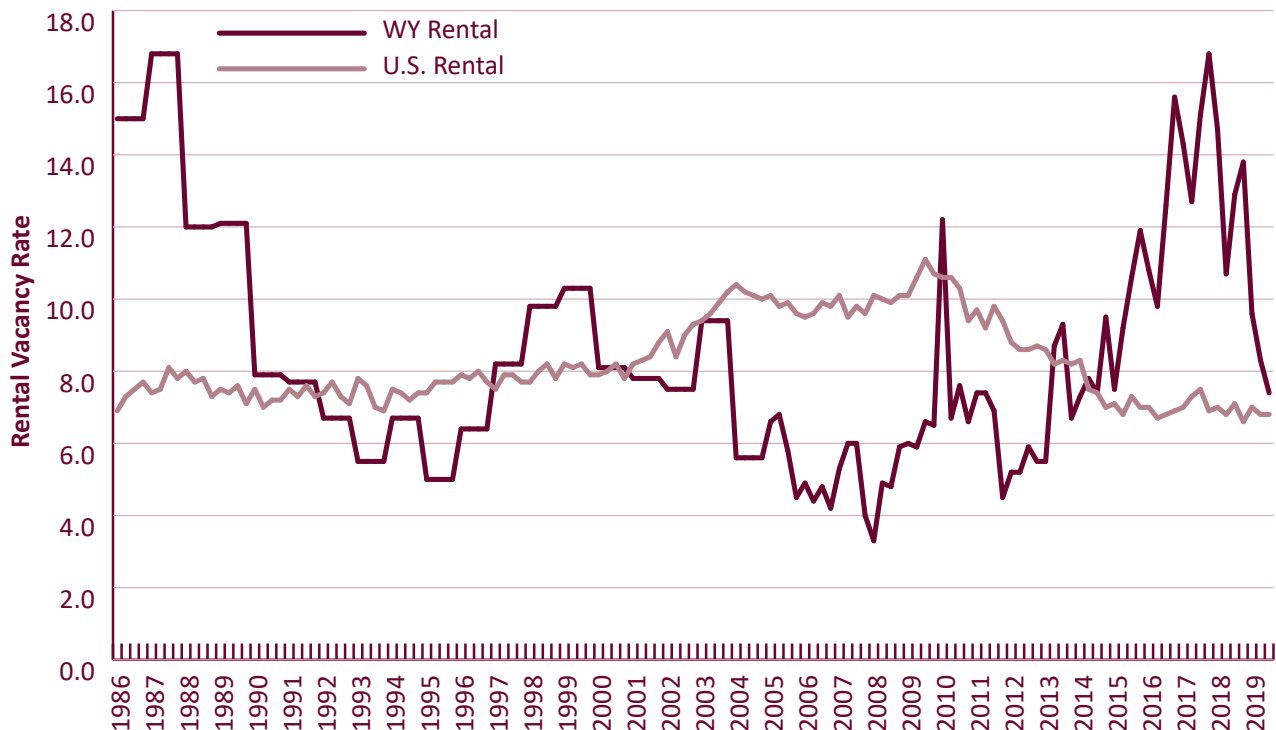

Figure 1: Homeowner Vacancy Rates for the U.S. and Wyoming, 1986Q1-2019Q3

Interestingly, Wyoming's vacancy rate was lower than the U.S. rate from 2002 to first quarter 2016 and then increased sharply. The sharp increase is likely related to the economic downturn in Wyoming which lasted from first quarter 2015 to fourth quarter 2016 (Moore, 2019). It appears that the vacancy rate might be a lagging indicator as Wyoming's economic downturn began in early 2015, but the vacancy rate did not start increasing until about a year later in 2016.

Rental vacancy rates in Wyoming and the U.S. are shown in Figure 2. Comparing Figure 1 and Figure 2 reveals that rental vacancy rates are much higher than homeowner vacancy rates. The rental vacancy rate in Wyoming ranges from a low of 3.3% in first quarter 2008 to highs of 16.8% in 1987 and in fourth quarter 2017.

The U.S. vacancy rate is more stable than the Wyoming rate. It ranged from a low of 6.6% in fourth quarter 2018 to a high of 11.1% in third quarter 2009. The most recent data indicate that the U.S. rental vacancy rate was 6.8% in third quarter 2019, which is very near its low of 6.6%. Wyoming's rental vacancy rate in third quarter 2019 was 7.4%, which is its lowest level since first quarter 2014, but was still much higher than its record low of 3.3%. The fact that Wyoming's vacancy rates vary so much more than U.S. rates might reflect the large amount of migration that occurs across the business cycle in Wyoming. In other words, when people move to Wyoming, the vacancy rate likely decreases, and when people move away, it likely increases.

Figure 3 (see page 12) compares

Source: U.S. Census Bureau

Prepared by D. Bullard, Research & Planning, WY DWS, 11/05/2019.

Figure 2: Rental Vacancy Rates for the U.S. and Wyoming, 1986Q1-2019Q3

Wyoming's unemployment rate and the state's rental vacancy rate. While the unemployment rate is a measure of slack in the labor market, or underutilized labor resources, the vacancy rate can be viewed as a similar measure of underutilized resources in the housing market. When jobs are plentiful, such as in 2006-2008, the rental vacancy rate tends to be low. However, when jobs are scarce and unemployment is high, the vacancy rate is also high.

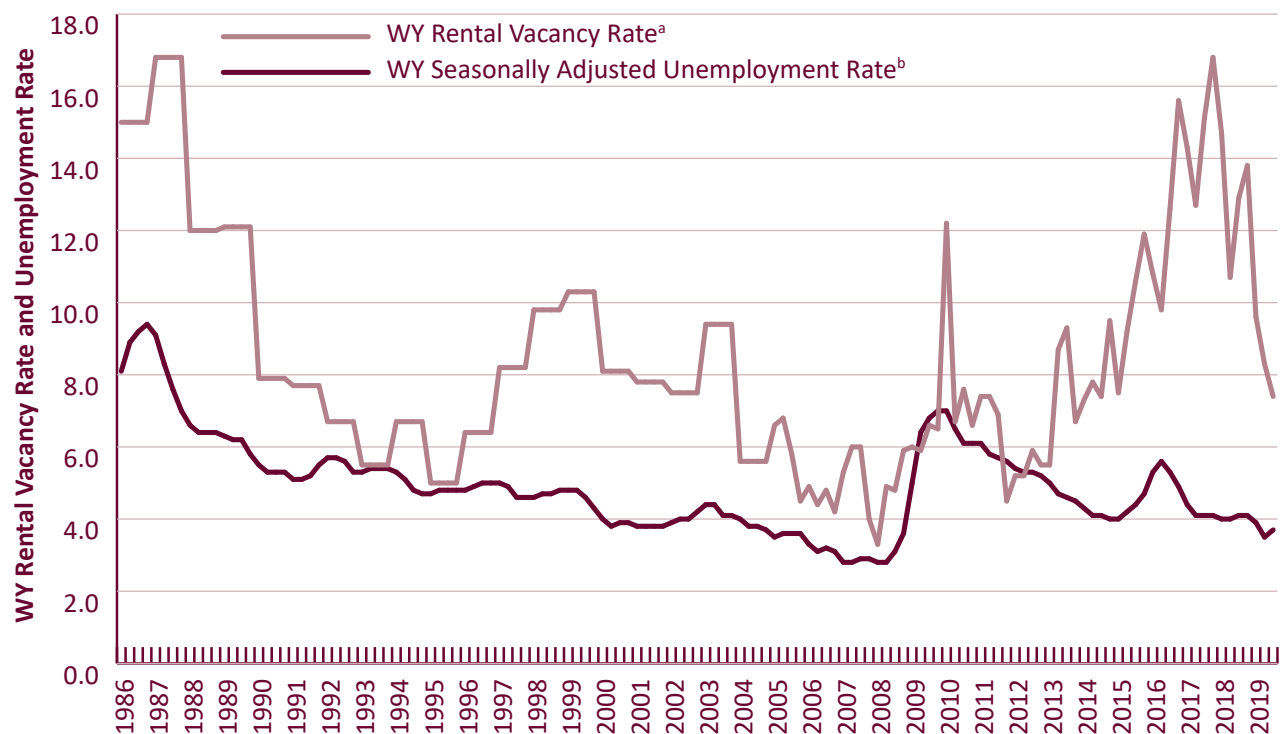

In summary, Wyoming's rental vacancy rate has tended to move with the state's unemployment rate. This may be related to the transient nature of the state's labor force, with individuals moving to Wyoming when jobs are abundant and leaving when jobs are scarce. Because they are available on a quarterly basis, and published shortly

after the end of the quarter, housing vacancy rates are valuable economic indicators for the state.

Figure 3: Wyoming Rental Vacancy Rates Seasonally Adjusted Unemployment Rate, 1986Q1-2019Q3

Wyoming Unemployment Rises to 3.8% in September 2019

by: David Bullard, Senior Economist

The Research & Planning section of the Wyoming Department of Workforce Services reported that the state's seasonally adjusted¹ unemployment rate increased from 3.7% in August to 3.8% in September. It remained lower than its September 2018 level of 4.2%, but was slightly higher than the current U.S. unemployment rate of 3.5%. Wyoming's labor force (the sum of all employed and unemployed individuals) was essentially unchanged from a year earlier (a decrease of 75 individuals or 0.0%).

Most county unemployment rates followed their normal seasonal pattern and fell from August to September. The largest decreases occurred in Campbell County, where unemployment fell from 4.5% to 3.9%; Platte County, where unemployment fell from 3.6% to 3.1%; Goshen County, where unemployment fell from 3.7% to 3.4%; and Crook County, where

unemployment fell from 3.1% to 2.8%.

From September 2018 to September 2019, unemployment fell in almost every county. Large decreases were seen in Uinta (down from 4.2% to 3.5%), Natrona (down from 4.4% to 3.7%), Weston (down from 3.3% to 2.7%), Sweetwater (down from 4.0% to 3.4%), Niobrara (down from 3.1% to 2.5%), Fremont (down from 4.5% to 3.9%), and Converse (down from 3.4% to 2.8%) counties. Goshen County's jobless rate rose from 3.0% in September 2018 to 3.4% in September 2019.

The highest unemployment rates occurred in Campbell and Fremont counties (both at 3.9%). The lowest rates were found in Teton County at 2.0%, Niobrara County at 2.5%, and Weston County at 2.7%.

Total nonfarm employment in Wyoming (not seasonally adjusted and measured by place of work) increased from 291,400 in September 2018 to 294,100 in September 2019, a gain of 2,700 jobs (0.9%).

¹ Seasonal adjustment is a statistical procedure to remove the impact of normal regularly recurring events (such as weather, major holidays, and the opening and closing of schools) from economic time series to better understand changes in economic conditions from month to month.

Current Employment Statistics (CES) Estimates and Research & Planning's Internal Estimates, September 2019
