1. Includes both public and privately owned firms.

2. The Average Weekly Wage (AWW) is calculated by dividing the total wage for the industry group by the total number of jobs for the industry group and the number of weeks in the observed quarter. The reader should also be aware that AWW's at the industry Group Level are susceptible to wage bias due to sample size, occupational distributions, seasonal pay and bonuses, and keying error. The AWW for all growing industries in 2018Q1 was \$1,251.11.

3. The percentage for Average Change is the employment-weighted average percentage change of the current and prior quarters  $(\text{employment change current quarter} + \text{employment change prior quarter}) / (\text{employment current quarter} + \text{employment prior quarter})$ .
